

PÜHAJÄRVE PÕHIKOOL / PÜHAJÄRVE BASIC SCHOOL

www.pyhajarve.edu.ee

Students from Sihva to explore the world, reducing the ecological footprint and increasing physical activity.

In the course of the project, we wish to explore the benefits of education systems in different European countries as well as exchange experience and knowledge with partner schools in other countries. Our aim is to record the good practices during the project and introduce the best of them in our school life. We can implement these ideas with the help of our student council.

Our school already focusses on nature and protecting the environment and we are actively engaged in reducing the ecological footprint. We are interested in learning about the practices, events and other activities that have been put in place in partner schools to reduce the ecological footprint.

We also want to increase the physical activity of children and young people and thereby reduce digital addiction. What can we do to get students away from their electronic devices?

We strongly believe that in the course of the project we will find answers to these problems and can cooperate in bringing out and finding solutions to similar problems of our partner schools.
